MANAGEMENT CONSOLE

MDM deployment			✓
SSO integration			✓
One-click contact addition			✓
Managed groups			✓
Instant revocation			✓

Olvid Enterprise makes it easy to deploy and manage Olvid.

Your users authenticate via your SSO, benefit from all the free features and the ability to contact each other with a single click, to make two-way and group calls, and can be automatically included in groups.

Your administrators have access to an administration console to manage all your company's internal and external users. Users can be managed manually, by CSV import, or driven by your existing directory (LDAP, Active Directory). You can instantly revoke a user in case of a device loss or theft, and create and manage groups. The application can be deployed manually or via MDM.

Prices are indicative only. In-app purchases available via App Store and Google Play.
